K-12 SUITABILITY WORKSHEET

| 1	What are your learning objectives?
2	What generative tool might support your above stated learning objectives? List the tool(s) and specify the version(s).
3	Make a list of the subjects that students will likely generate with the above tool.
4	Generate a sample set of images representing the listed subjects. Be sure to generate the subject in unusual locations, from unusual angles, bound to unusual objects, or depicted with unusual attributes

5	Does the model generate your subject accurately, semi-accurately or not at all?
6	How does the model perform with the subject <u>in unusual locations</u>, <u>from unusual angles</u>, <u>bound to unusual objects</u>, or <u>depicted with unusual attributes</u>?
7	Do the images vary as demographic characteristics like skin color, gender or region change?
8	Do these variances reflect any known harmful societal stereotypes?

9	Does the model have guardrails to prevent the generation of inappropriate content?
10	Can the chosen model handle misspellings in text prompts?

Other notes.
